

PARKING STRUCTURE LAYOUT AND ACCESS

Parking is provided in the Parking Structure and in a garage under Building 4. Collectively, these parking areas will offer up to 2,000 stalls serving visitors and Costco employees.

PARKING STRUCTURE FEATURES:

A 630,000 sf new parking structure has been centrally located and proposed to serve both existing buildings and future campus development. The parking structure will be activated at the street level by 8,000 sf of accessory spaces, including an exhibit hall, a flex/fitness center, and conference space. The building footprint will be separated by a drive aisle to provide fire and loading access to Building 3. The first floor height of the garage is intended to mirror the first floor of the office building, establishing the visual base of both buildings as well as accommodating fire and loading access to Building 3. A speed ramp from the parking structure’s ground level to its second level will provide more open space.
